

Washington State Airport Economic Impact Calculators

Client

Washington State DOT

Facts

Period

2020

Project Country

United States

Washington State DOT has contracted with EBP to create two economic impact calculators for assessing the impacts on employment, productivity, and business output due to changes in airport operations, capital spending, and employment for individual airports and for groups of airports within a specified region. These systems are hosted on our cloud servers, providing web browser access to a significant repository of economic data used to determine economic impacts.
