

COMPASS Performance Measure Framework Evaluation Tool

Client

Community Planning Association of
Southwest Idaho

Facts

Period 2018

Project Country United States

As part of the Performance Measure Framework (PMF) project for Community Planning Association of Southwest Idaho (COMPASS), EDR Group (now EBP) created an evaluation tool that incorporates measures for 11 elements of the Communities in Motion 2040 Transportation Plan.

This system allows for the exploration of project package impacts and performance comparisons for individual links, intersections and TAZs using a map viewer. It also shows the aggregate regional performance for the various measures relative to base conditions.

The system is a web-based application accessing a PostgreSQL Database Management System. Visualization of comparison results is provided using an interactive map, as well as tables and graphs, showing the scoring and relative weighting of the project packages.
